

Take Control of Your Enterprise-Class Messaging Environment

ZANTAZ Enterprise Archive Solution (EAS) for Notes enables your organization to create an efficient, searchable archive for the retention, management and control of corporate email. ZANTAZ EAS enables you to optimize your Lotus[®] Domino[®] environment, manage your end-user mailboxes, ensure message retention and disposition for compliance and corporate governance and efficiently and accurately discover email for litigation or regulatory purposes.

Manage and Control Your Lotus Domino/Notes Environment

ZANTAZ EAS for Notes handles the archival, retrieval, management and long-term retention of messages through a comprehensive range of features:

- Manage the capture, index, archival, search and retrieval of email messages and attachments, including all compliance-related metadata
- Save substantial storage space while preserving all important corporate information
- Maintain the ability to instantly search and retrieve messages and attachments amongst millions of emails
- Eliminate the mailbox management burden from end-users and administrators
- Optimize storage resources by applying enterprise-wide Single Instance Storage (SIS) and compression to reduce overall email and file volumes by 50-80%
- Enable unconstrained growth through a uniquely scalable and robust archive architecture
- Configure an enterprise-wide archive with the flexibility and control to address your specific and unique requirements
- Manage the flow of unstructured information from the messaging archive to a litigation management solution (such as ZANTAZ Introspect)

EAS for Notes Architecture

Superior Storage Optimization and Mailbox Management

ZANTAZ EAS increases the performance and stability of your Domino environment by automating the management of electronic mailboxes, optimizing the storage of email, eliminating the need for mailbox quotas and preventing the proliferation of personal archives.

- 50%-80% reduction in overall email storage volume with intrinsic Single Instance Storage (SIS) and compression
- End user productivity increased with the transparent automation of mailbox management using centrally managed and automatically applied policies that selectively move messages from the email servers into the archive
- Email server optimization by offloading messages from the email servers into the archive based on corporate policies, keeping email servers stable and highly responsive, and eliminating the need to impose mailbox quotas on users

Centralized Retention and Disposition of Email for Compliance and Discovery Readiness

ZANTAZ EAS for Notes enables centralized control throughout the lifecycle of email records including the capture of journaled mailboxes, the preservation of all required metadata fields, automated retention management, enterprise-wide access and review, and ultimately, disposition.

- Ensures accurate retention and disposition by capturing all messages in native format, maintaining all metadata fields and enabling a retention period to be set for each archived file or message
- Ongoing centralized and automatic policy-driven archive management enables corporations to reliably purge all copies of a given file or message from the system when appropriate
- Preservation hold capability prevents deletion of any information required for ongoing legal or regulatory matters
- Enterprise-wide discovery and review capabilities for cost-effective production of unstructured information

Massive Scalability

Through a distributed architecture, ZANTAZ EAS for Notes allows companies of all sizes to deploy a solution that fits their needs today, with the ability to grow as their needs change in the future:

- Unique distributed parent-child architecture enables maximum efficiency and scalability
- Highly efficient storage structure: an incremental file approach optimizes backups and provides consistent retrieval performance that does not degrade as the archive size increases
- Multiple indexes with federated search: create local indexes at each geographic location, and then search within them or across multiple sites, creating a single, federated search result for fast, efficient access to messages stored anywhere

Unmatched Flexibility and Control of Corporate Information

ZANTAZ EAS for Notes is designed to adapt to your enterprise's unique environment:

- Archiving process flexibility and control: create policies based on a wide range of file and message attributes and parameters
- Index flexibility and control: for efficient search and retrieval, ZANTAZ EAS for Notes supports the full text indexing of hundreds of different document formats and dozens of different languages

ZANTAZ EAS for Notes was designed for optimal throughput. Domino Server performance is dramatically improved and users enjoy instant access to all of their email and files without the associated cost and management issues:

- Multi-process technology with distributed load balancing ensures optimal use of system and network resources
- Archival Performance: independent industry tests have documented second-to-none processing speeds
- Retrieval Performance: ZANTAZ EAS for Notes offers immediate access to the information stores, allowing organizations to leverage the value of their corporate intelligence

ZANTAZ EAS for Notes Specifications:

Server:

Windows 2000 or later with all service packages

Database:

Microsoft SQL 2000 sp3a/SQL2005(32/64 bit)
Oracle 9i and up

Supported Systems:

Lotus Domino R6.5 or later

Minimum Server Hardware:

Pentium 4 - 1.4GHz
1 GB RAM
2 GB free disk space

Supported Storage Media:

WORM, Tape, DVD, CD-R, NTFS

Certified Compliance Platforms:

EMC Centera, NetApp Snaplock, NearStore, and FAS, Sun
Intellistore, IBM DR550, ZANTAZ Digital Safe (managed storage
in fully redundant, highly secure data centers)
