

Powerful Search and Retrieval

ZANTAZ EAS Search offers your organization powerful search and retrieval capabilities for your email and files. With ZANTAZ EAS Search, you can enable every employee to conduct full content searches throughout the ZANTAZ EAS archive based on set permissions.

Advanced Email Searching Capabilities

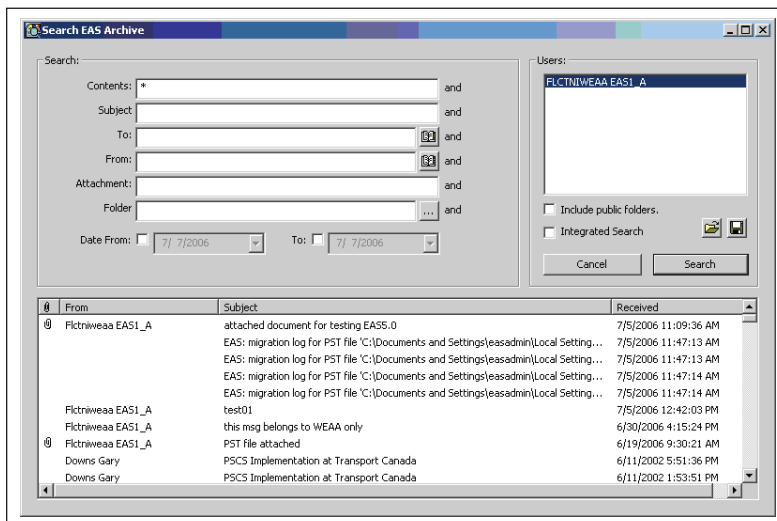

ZANTAZ EAS Search allows employees to conduct a range of searches from their desktops:

- Full content and attachment searching of the ZANTAZ EAS storage repositories
- Search with keywords, phrases, Boolean logic and wild cards
- Search across multiple domains, repositories and geographies
- Immediate access to search results
- Can be leveraged for individual employee use, evidentiary purposes or regulatory compliance
- Works across multiple indexes
- Greatly improves IT department productivity

Fast and Accurate Searching For Compliance and Discovery

For organizations that need to meet various industry regulations or be able to efficiently find email for litigation requests, ZANTAZ EAS Search enables compliance and legal personnel to easily detect suspicious email, and search across the entire archive of email from a single point of access:

- Search for potential organization or industry violations
- Ensure that your company is upholding best practices in email content
- Single instance search results
- Optional compliance user-restore right from the desktop
- Quickly process millions of documents across the EAS storage repository

EAS Search Interface

Enhanced Searching Capabilities for End Users

ZANTAZ EAS Search provides end users with enhanced searching capabilities that are not available with standard email client search utilities, including:

- Index and search of attachment content (email and PST files)
- Supports more than 30 languages, including English, French, Japanese, German, Italian, Chinese, Arabic and Hebrew
- Instantaneous search results
- Wildcard searching
- Boolean-supported searching
- Index and search of up to 300 attachment types
- Indexing of categories field, providing full text indexing and subsequent searching of the categories property of archived messages
- Customizable user permissions:
 - o To search across multiple users
 - o To search across shared or public folders
 - o To search all archived information (enterprise-wide search results)
 - o To restore mail from search results to any location that users have permission to search, such as a mailbox, a public folder or a PST file
